# Agenda

- 18:30 – Group updates/news/announcements
- 18:40 - "Reverse proxy automation - Varnish as a Service" by Tomasz Ziółkowski (Allegro) [PL]
- 19:40 - "Evolution of the IoT backend platform. From a monolith to microservices and toward cloud native infrastructure" by Tomasz Tarczyński (Gigaset) [EN]
- 20:40 - Small talk time

The summer break is coming but...

...we need your DevOps presentations

To share and spread the knowledge :)

We will return on September!

Today's presentation

# Tomasz Ziółkowski - "Varnish as a Service"

Allegro uses Varnish as a Reverse Proxy and it is responsible for:

- URL routing to appropriate microservices
- composition HTML pages based on ESI tags
- caching public content based on response headers

# Tomasz Tarczyński - “From a monolith to microservices”

- story about how in Gigaset they evolved a cloud-base platform to handle business requirements
- story about how they handle the “rapid development” cycle
- lots of case-studies on how the benefits of different DevOps practices helped them to iterate rapidly on building their product

Enjoy...
