Today's presentation

Piotr Kłoskowski:

"Istio - when and why you should use it in your Kubernetes solution"

- What is Istio?
- What does it really add to the Kubernetes party?
- What operational challenges does it actually address?
- Maybe it just adds more operational overhead without clear benefits for your solution?
- Do you really need it?

Błażej Kwaśniak:

“Knative - new hero in serverless world”

- serverless seems to be next big thing in DevOps world
- there are couple of projects which aims to bring serverless capabilities into our Kubernetes
- will dig into some of those solutions and find out how do they really work
- what is the actual use case?
- how Knative is different from each of them?

Enjoy...
