**CLOUD NATIVE**  
KEYNOTE:  
PINI REZNIK

**KUBERNETES**  
KEYNOTE:  
IGNACY KOWALCZYK

**CLOUD**  
KEYNOTE:  
DARIUSZ DWORNIKOWSKI

**SERVERLESS**  
KEYNOTE:  
SEBASTIEN GOASGUEN

**CALL FOR PROPOSALS:** [www.cloudnativewarsaw.com/cfp](http://www.cloudnativewarsaw.com/cfp)

**EARLY BIRD TICKETS:** [cloudnativeconference2019.evenea.pl](http://cloudnativeconference2019.evenea.pl)

# Agenda

- 1. Configuration Management**
- 2. Why GitOps**
- 3. GitOps Demo: Flux**
- 4. Demo 2: GitOps + Helm**

- **Infrastructure as a Code**
- **GIT** – as a single source of truth
- **Tools:**  
Ansible / Chef / Puppet / Salt

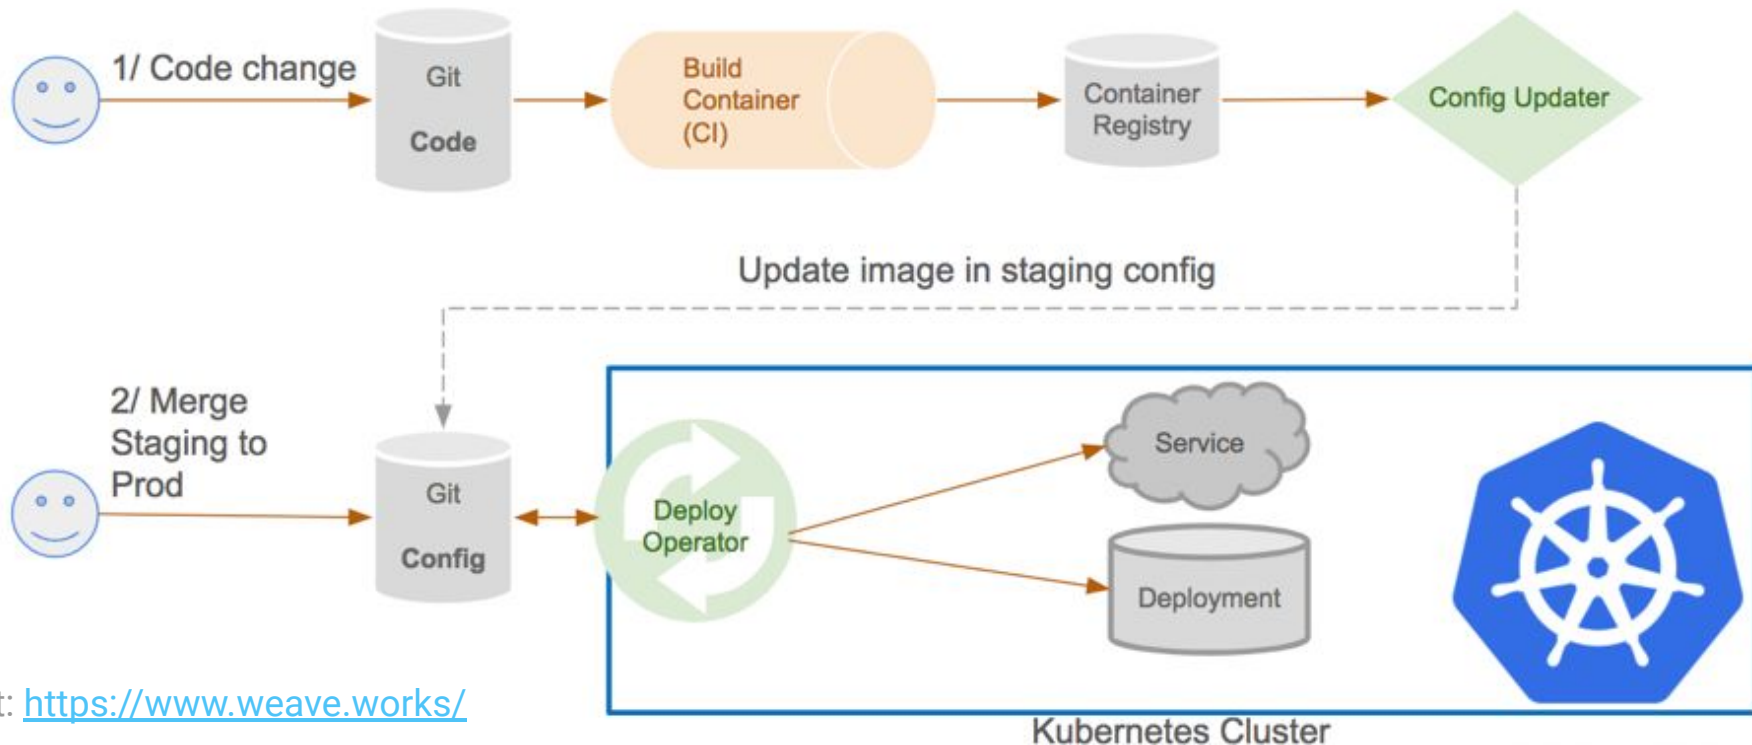

- **DSL** – a simple and constrained language
- **Resource Abstraction Layer**
- **Declarative**: describe the desired state
- **Templates**: ERB
- **Modules**: public and private

- **Control plane** provides a **Declarative API**
- Declare the **desired state**
- **Control plane** makes sure that the **actual state** converges to the **desired state**

# Kubernetes: Why GitOps

- Can we **declare** all the state in **GIT**?  
And expect the system to **converge**.
- Can we have something like **modules**?

## Example GitOps Pipeline

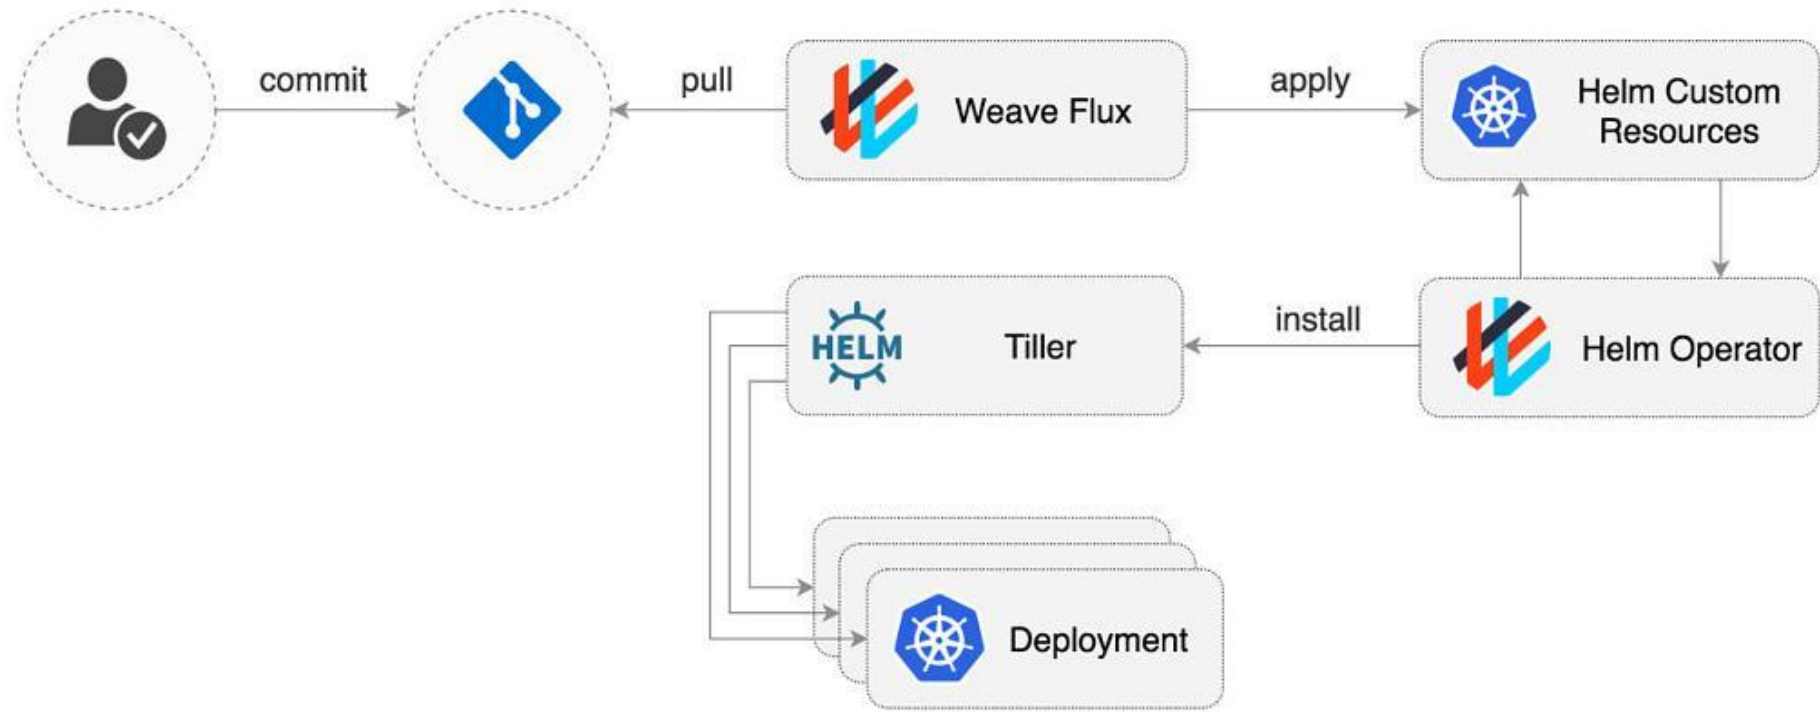

## Demo

<https://github.com/ttarczynski/gitops-demo>

- We **declared** all the state in **GIT**
- But can we have something like **modules**?

# GitOps + Helm

## Demo

<https://github.com/ttarczynski/gitops-demo>

- The **entire system** is described **declaratively**
- The canonical **desired** system **state** is **versioned** (with Git)
- **Approved changes** to the desired state are **automatically applied** to the system
- **Software agents** ensure **correctness**
